

KHALED GAMIL MOHAMMED ALHASANI

Cybersecurity Undergraduate • Penetration Testing • Digital Forensics • Security Operations

Melaka, Malaysia | +60 11-1133 2812 | khalidalhasani0090@gmail.com
linkedin.com/in/khalid-al-hasani | github.com/okkb354

Available for 24-week industrial internship • September 2026 – February 2027 • Open to relocation nationwide

PROFESSIONAL SUMMARY

Final-year Bachelor of Computer Science (Computer Security) undergraduate at Universiti Teknikal Malaysia Melaka and Google Cybersecurity Professional Certificate holder, with hands-on experience across both offensive and defensive security. Eleven fully documented projects spanning web application penetration testing, malware analysis, network forensics and incident response, wireless security assessment and ISO/IEC 27005 risk management. Confident in Kali Linux with Burp Suite, Wireshark, Suricata and custom Python automation, and experienced in writing clear technical reports with actionable remediation guidance. Fluent in Arabic and English, and willing to relocate anywhere in Malaysia for the right placement.

EDUCATION

Bachelor of Computer Science (Computer Security) with Honours

Expected November 2027

Universiti Teknikal Malaysia Melaka (UTeM) — Faculty of Information and Communication Technology, Melaka

Relevant coursework: Hacking Techniques & Prevention • Malware Analysis & Digital Forensics • Network Security Workshop • Software Development Workshop

CERTIFICATIONS & AWARDS

- **Google Cybersecurity Professional Certificate** — Google / Coursera, June 2026. Nine-course program covering SIEM tools, intrusion detection systems, Linux, SQL, Python automation, and threat and vulnerability management. Credential ID: YOVIK1YMD2TS.
- **Certificate of Participation — Workshop II Innovation Competition** — Faculty of Information and Communication Technology, Universiti Teknikal Malaysia Melaka.

TECHNICAL SKILLS

Security Domains: Vulnerability Assessment & Penetration Testing (VAPT), Incident Response, Digital Forensics, Malware Analysis, Threat Intelligence, Log Analysis, SIEM Monitoring, Risk Assessment & Compliance, Network Security, Wireless Security, OSINT

Offensive Security: Burp Suite, Nmap, Gobuster, dirb, Aircrack-ng suite (airmon-ng, airodump-ng, aireplay-ng), CyberChef

Forensics & Malware Analysis: Wireshark, tshark, NetworkMiner, PEstudio, Process Monitor, Regshot, Detect It Easy, VirusTotal, MalwareBazaar

Defensive Security & Monitoring: Suricata IDS, Snort alert analysis, Elastic Stack SIEM (Elasticsearch, Kibana, Filebeat), Web Application Firewall, RADIUS

Networking & Systems: VLAN segmentation, ACL, NAT, IPsec VPN, DNS, DHCP, Port Security, Active Directory, Single Sign-On, Windows Server 2016

Programming & Scripting: Python (NumPy, OpenCV, scikit-image), C++, JavaScript, SQL, Regular Expressions, Bash

Standards & Frameworks: OWASP Top 10, ISO/IEC 27005, ISO/IEC 27002

Platforms & Tools: Kali Linux, Ubuntu 22.04 LTS, Windows Server 2016, VMware Workstation, Git & GitHub

Languages: Arabic — native speaker • English — professional working proficiency

CYBERSECURITY PROJECTS

Full reports, source code and documentation available at github.com/okkb354

Web Application Vulnerability Assessment & Penetration Testing (VAPT)

Burp Suite • Nmap • Gobuster

- Identified, exploited and verified 14 distinct vulnerabilities across DVWA, OWASP WebGoat/WebWolf, OWASP Juice Shop and a custom portal, each mapped to the OWASP Top 10.
- Achieved authentication bypass and full database extraction via SQL injection, executed arbitrary shell commands through OS command injection, and demonstrated local file inclusion, path traversal, IDOR and DOM-based/reflected XSS.
- Authored developer-focused remediation guidance covering parameterised queries, bcrypt password hashing, context-aware output encoding and server-side authorisation.

Network Forensic Analysis & Incident Response — HawkEye Infostealer

Wireshark • NetworkMiner • Python

- Reconstructed the complete attack lifecycle of a compromised Windows host, tracing activity from initial HTTP reconnaissance through to plaintext credential and keystroke exfiltration over FTP.

- Recovered exfiltrated artefacts including keystroke logs, harvested browser credentials and desktop screenshots, and identified hardcoded FTP credentials alongside multiple command-and-control servers.
- Built a custom Python IoC extraction tool using regular expressions and multi-encoding fallbacks to parse high-volume IDS alert dumps and automatically deduplicate malicious C2 addresses, substantially reducing manual triage time.

Malware Analysis & Digital Forensics — ValleyRAT / DCRat

PEstudio · ProcMon · Regshot

- Performed static and dynamic analysis of a 32-bit Windows remote access trojan within an isolated VMware laboratory, following a structured malware analysis lifecycle.
- Identified registry-based persistence, privilege escalation API imports and a stealth child process, and applied PE section entropy analysis to detect probable packing and obfuscation.
- Documented network indicators of compromise including the C2 domain, IP address and HTTP beaconing behaviour, validating all findings against VirusTotal and MalwareBazaar threat intelligence.

Secure Network Infrastructure & Security Services

Team project · Competition award

- Designed and deployed a segmented enterprise network with dedicated VLANs for wireless, IT staff, server and guest zones, hosting 20 services across Windows Server 2016, Ubuntu 22.04 LTS and Kali Linux.
- Implemented a Web Application Firewall, RADIUS authentication and Single Sign-On integrated with Active Directory, alongside ACL, NAT, IPsec VPN and port security hardening.
- Deployed Suricata IDS integrated with the Elastic Stack (Elasticsearch, Kibana, Filebeat) to deliver a real-time SIEM monitoring and incident response dashboard.

Enterprise Cyber Risk Assessment (ISO/IEC 27005)

Risk management · Compliance

- Executed the complete ISO/IEC 27005 risk management lifecycle for a simulated multinational IT infrastructure, from context establishment through to risk treatment.
- Catalogued and valued 53 critical assets across five categories, then analysed 12 risk scenarios using a semi-quantitative 5×5 likelihood and impact matrix assessed against the CIA triad.
- Delivered a prioritised risk treatment plan mapped directly to ISO/IEC 27002 controls, including multi-factor authentication, VLAN segmentation, network access control and immutable offline backups.

Wireless Security Assessment — WPA2-PSK Penetration Testing

Kali Linux · Aircrack-ng

- Conducted an authorised wireless assessment using monitor-mode reconnaissance, a targeted de-authentication attack, and capture of the four-way WPA handshake, verified through EAPOL frame analysis in tshark.
- Documented five vulnerabilities in a formal risk matrix, including a weak passphrase, disabled 802.11w Management Frame Protection and TKIP fallback through legacy compatibility mode.
- Recommended remediation including migration to WPA3-SAE, enforcement of Management Frame Protection and strict AES/CCMP encryption.

Additional Projects

- **Botnet Detection via DNS Traffic Analysis** — Real-time detection system for domain generation algorithms, DNS tunnelling and fast-flux activity, built with Suricata IDS and Python.
- **Web Penetration Testing & Network Enumeration Lab** — Mapped a target subnet via ARP analysis and Nmap service/OS fingerprinting, then exposed administrative and configuration directories through dirb brute-forcing, revealing information disclosure and weak access control.
- **Digital Image Watermarking — LSB vs Keyed DCT** — Implemented and benchmarked two watermarking schemes in Python using Quantisation Index Modulation and keyed pseudo-random block selection, evaluating robustness against five attacks with PSNR, SSIM, BER and normalised correlation.
- **OSINT & Digital Footprint Analysis** — Authorised academic exercise mapping publicly exposed personal data using passive OSINT techniques and username correlation tooling, demonstrating the privacy risk of over-disclosure.
- **Gym Management System** — C++ application handling member registration, attendance tracking, subscription renewal and administrative reporting, with full software development lifecycle documentation.

WORK EXPERIENCE

AI Visual Designer & Marketing Assistant

Part-time

Deiraa Collection (deiraa.co) — Modest Fashion Brand, Malaysia

- Produce AI-generated product visuals for a modest fashion label, including model imagery and colourway variations, reducing dependency on physical photoshoots.
- Support social media marketing and content production for the brand's TikTok channel, contributing to audience growth.

Student Services Agent

Part-time

Ofok Student Services — International Student Recruitment, Malaysia

- Advise prospective international students on Malaysian university applications, admissions requirements and enrolment.
- Handle client enquiries and documentation in Arabic and English, coordinating between students and institutions.
